Subject: FW: Access to OxyChem's Wichita Plant

Hi Brad,

I am forwarding the below since I am not sure whether the EPA-email Phil used will reach you. I don't know that there is any follow-up other than fyi.

You should have received our responses to comments on the RFI Summary document and the risk assessment work plan upon your return. Please don't hesitate to contact me or Bruce if you have any initial questions. Thanks and hope all is well.

Juan

Subject: Re: Access to OxyChem's Wichita Plant

RCRA

Ex. 7 (c)

Sirs, Here is the latest problem presented to me by Oxy. [REDACTED] is in my opinion responsible for this action from a failure to communicate. When I was employed by the site I served on the plant safety committee and many issues of safety were addressed including internal and external. I have lost a great deal of respect for Oxy and KDHE in their determination I pose a threat of any kind, except for responsibility for environmental damage. It goes back to KDHE stating they would furnish the local library with the semi annual report and then failed to follow through. [REDACTED] Ex. 7 (c)

[REDACTED]

[REDACTED] I decided to drop the issue. I would send this to his supervisor but I don't know who it is. The decision by Oxy and KDHE has rekindled by waning interest and I feel their decision on my having a destructive nature is completely misplaced. I will consider legal remedy, but will remain active in the damage done to see it rectified not contribute to further destruction.

Phil,

You requested clarification regarding our decision to not allow you on the plant site. Managing access to the plant is OxyChem's responsibility and we do so to ensure the safety of our employees, the facility, and our community. Access is a

privilege and we will deny access if we have concerns about safety. As you know, the Kansas Department of Health and Environment informed us of their concerns arising out of statements you made regarding the Wichita plant. OxyChem takes this situation very seriously. In fact, the Community Involvement Group (CIG) meetings have been moved from the plant to another location, at OxyChem's expense, solely to accommodate your continued participation in these meetings.

Based on the information provided by the KDHE, you will not be permitted access to the plant site and any of our facilities, including the tour of the IW treatment facility requested by the CIG.

Sincerely,

Steve Hieger
